

Advanced Master in Orthodontics and Dentofacial Orthopedics

(60 ECTS – 1,500 hours - 1 year)

The **Advanced Master in Orthodontics and Dentofacial Orthopedics** is a one-year postgraduate program (60 ECTS) that builds upon the foundational knowledge acquired in the Essential Master.

This program focuses on advanced clinical skills and interdisciplinary approaches, with modules covering finishing procedures, adult orthodontics, relapse management, and practice management. Students gain extensive hands-on training through clinical practice and case presentations, while mastering advanced techniques such as straight wire, MBT, and self-ligating systems.

This program is ideal for dental professionals aiming to deepen their expertise, manage complex orthodontic cases, and integrate advanced treatment modalities into clinical practice.
